Item Recommender model Instructions

1. Ensure Item_recommender.bat and itemRecommender.py are in the same directory as the Dashboard
2. Use the respective Task Scheduler for your OS
 - Task Scheduler for Windows
 - Automator for IOS
 - Cron commands
3. Schedule your computer to run the item_recommender.bat at your chosen interval of time.
4. You can test run the programme by directly running the item_recommender.bat file.
5. If the script works, it should create a csv file called AprioriResults which should also be within the same directory as the dashboard.
6. Ensure Master_Products.xlsx is in the same directory as well
 - This csv file represents all the different products the company sells and can be updated accordingly.
7. The recommendation dashboard should now work.
